

Project Design Phase Problem – Solution Fit Template

Field	Details
Date	29 September 2026
Team ID	SWTID-2026-1012
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Section	Content
1. Customer Segment(s)	ServiceNow Incident Management users - Support Agents, ITIL users, Admins handling High Impact incidents
2. Jobs-to-be-Done / Problems	Ensure High Impact incidents always have an owner (Assigned To) and correct Urgency, while State changes stay controlled
3. Triggers	Escalations on unassigned High Impact incidents; audits showing incorrect Urgency values; State field changed without proper review
4. Emotions: Before/After	Before: worried, unsure if critical incidents are properly owned. After: confident that High Impact incidents are always assigned and correctly flagged
5. Available Solutions	Manual reminders to assign owners; relying on agent discipline; post-save audit reports (reactive, not preventive)
6. Customer Constraints	Must work within existing ServiceNow platform; limited to admin/ITIL configuration access; no heavy custom code
7. Behaviour	Agents set Impact quickly, may skip Assigned To; sometimes change State directly from list view for speed
8. Channels of Behaviour	Online: ServiceNow Incident form & list view (web/desktop)
9. Problem Root Cause	No dynamic validation exists to enforce Assigned To for High Impact incidents or protect State from inline list edits
10. Your Solution	UI Policy 'High Impact Control' (Assignment group mandatory and Urgency read-only when Impact=High) + Client Scripts: onChange (auto-set Urgency), onSubmit (Assigned To mandatory for High Impact), onCellEdit (block State list edits)
