

Project Design Phase Proposed Solution Template

Field	Details
Date	29 September 2026
Team ID	SWTID-2026-1012
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

S.No.	Parameter	Description
1.	Problem Statement	High Impact Incidents are sometimes saved without an Assigned To, Urgency is not automatically aligned with Impact, and the State field can be changed directly from the list view without review
2.	Idea / Solution description	Create a UI Policy 'High Impact Control' making Assignment group mandatory and Urgency read-only when Impact=High, an onChange script to auto-set Urgency to High, an onSubmit script that blocks save if Assigned To is empty for High Impact, and an onCellEdit script blocking State edits from the list view
3.	Novelty / Uniqueness	Combines a declarative UI Policy with three distinct Client Script types (onChange, onSubmit, onCellEdit) to cover field auto-population, mandatory validation, and list-view protection in one cohesive configuration
4.	Social Impact / Customer Satisfaction	Ensures every High Impact incident is owned and correctly flagged, improving response time; protects data integrity by preventing careless State changes
5.	Business Model (Revenue Model)	Internal process-improvement configuration within an existing ServiceNow instance; value is operational efficiency, not direct revenue
6.	Scalability of the Solution	Same UI Policy + Client Script pattern can be extended to other Impact/Urgency combinations or other tables like Problem and Change Request
